

Flush King™ is newly improved! Our clear plastic barrel is tilted at a 45 degree angle and rotates a complete 360°. Right handed or left handed, just turn the valve to either side and find out how easy it is to move to just the right spot for your tight sewer connection! You can still see the cleaning in action and when the tank is empty. Don't just empty your tanks, flush them!

Four hooks on the clear plastic fitting ensure a tight leak-proof fitting on your sewer drain!

You'll see after one rinse exactly what would have been remaining in the tank. Tissue and other debris that would have been stuck to the tank walls will now be flushed out.

Sewer and water hose not included

The purpose of the Flush King valve is to provide an easy and efficient way to clean (backwash) your holding tanks.

Advantages of the Flush King:

- μ Fits most Motorhomes, Trailers and 5th Wheel RVs

**NOTE: You should not leave the RV unattended during the flushing cycle to avoid overfilling the holding tank.**

Unlike other products in which the holding tank and sewer must be at the same height, the Flush King will fill the tank at any height or angle of plumbing!

Twist the Flush King on to the sewer pipe. Then connect the sewer hose. Connect your "gray" or "green" water hose to the valve. **Do not connect a drinking water hose to the Flush King!** You are now ready to dump, rinse or clean your tanks in one easy operation! When you are finished, simply remove the Flush King and store it away.

Regular cleaning of the gray tank will help eliminate the odor caused by food particles remaining in the tank as well as soap scum, grease, and body oils, etc.

You can see the difference Flush King makes!

**Caution:** Over twisting, excessive force or leaning on the valve while connected may cause the prongs to break!

- μ Improves sensor performance
- μ Clear barrel allows you to see the cleaning in action
- μ *Easy to use. Twist on and off*
- μ Connects to the exterior of the RV and eliminates wands and hoses inside the vehicle
- μ *Quick and efficient way to fill, rinse and remove remaining residue after dumping the holding tanks*
- μ Works at any height or angle of plumbing
- μ Backflow preventer included
- μ *Patented design ensures successful cleaning of the gray and black tank*
- μ *Non permanent attachment*
- μ Helps break up clogs in pipes
- μ *Cleans tanks, pipes and sewer hose all at one time*
- μ *Sanitary way to empty and clean tanks*

***Flush King is guaranteed against manufacture defects or your money will be returned. Not guaranteed against breakage by the consumer. In case of breakage, please contact the manufacture for repair.***
